

Object Tracking Application

This application tracks moving objects in a video using OpenCV and Streamlit. It uses the MOG2 background subtractor to detect moving objects and draws a green rectangle around them.

Features

- Upload a video file in MP4, AVI, MOV, or WMV format.
- Detect moving objects in the video using the MOG2 background subtractor.
- Draw green rectangles around detected objects.
- Display the processed video frames in the Streamlit app.

Requirements

- streamlit
- opencv-python-headless
- numpy

You can install the required packages using the following command:

```
pip install -r requirements.txt
```

Usage

- Run the Streamlit app:

```
```sh
streamlit run app.py
```
```
- This App deployed on streamlit cloud.
- Upload a video file and see the object tracking **in** action. [Here]
